

**Hine**  
**SNOWBRIDGE**

**1976**

## About Our Materials

**Fabric:** Our nylon fabric was chosen for its strength, durability, waterproofness and light weight.

**Leather:** We use only the finest top grain, chromed tanned leather. Chosen for its strength (shoulder straps and accessory strap holders) and abrasion resistance (pack bottoms), all our leather is treated to make it highly resistant to water penetration.

**Zippers:** We use two types of zippers. Both are strong, durable, and provide smooth running performance. The coil zipper provides self repairing qualities while the Delrin zipper (with teeth as opposed to the coil) is used on models designed specifically for extreme cold weather applications where "icing" of the zipper might otherwise be a problem.

**Webbing:** Only nylon webbing is used because of its properties of strength, long life, abrasion resistance, and mildew resistance.

**Hardware:** Tested and chosen for its strength and long lasting finish, our hardware is the finest available anywhere.

**Aluminum:** The aluminum used for our stay bars has been chosen for its light weight, strength, and resiliency/bend ratio. Two different types are used depending on the function and needs of the pack model.

**Thread:** Our 3-ply, bonded nylon thread was originally designed for the shoe industry. In most cases the thread has as much or more strength than the already tough nylon fabric through which it is sewn.

## About Our Features

**Shoulder Straps:** HINE/SNOWBRIDGE packs come with three different kinds of shoulder straps. The internally framed packs, and the Cirques have shoulder straps made of nylon fabric covered foam to provide extra shoulder comfort for carrying the large loads which these packs are designed to handle. The Serex straps are also internally reinforced with nylon webbing.

All the other models (with the exception of the H/S Basic) feature fully padded, swing mounted, 7 to 8 ounce leather shoulder straps. Because of this swing mounting on pins, the straps adjust readily to the wearer's shoulder width and load, providing a more comfortable riding pack. The felt padding insures comfort and allows the shoulders to "breathe."

The H/S Basic has 2" wide shoulder straps made from a specially soft nylon webbing.

**Waist Belts:** Waist Belts serve two functions on HINE/SNOWBRIDGE packs. On the smaller "day" packs they prevent the pack from bouncing and shifting when on the trail. On the larger, internally framed packs, they provide the major portion of the carrying support. Our unique removable waist belts are standard on most models. They go on and off in seconds and

can be removed when not wanted or in the way. The length of these removable belts is also adjustable from either end to allow exact positioning of the snap clip where it will be least in the way. The wide waist belt on the internally framed packs is made of nylon covered foam and is reinforced with 2" webbing. This waist belt is designed to carry most of the pack's weight, transferring it to the wearer's hips.

**Leather Bottoms:** Many HINE/SNOWBRIDGE packs have leather bottoms. The leather in these models is a 5 to 6 ounce full grain (top grain), stuffed leather. (Stuffed means that the leather has been impregnated with "waxy" compounds at the tannery to enhance its waterproofness.) A leather bottom improves a pack in two ways. It increases the pack life because it is far more abrasion resistant than a nylon bottom and it assists greatly in keeping a pack's shape, improving carrying comfort.

**Aluminum Stays:** Stay bars in the Mountaineers and the Chinquapin are made from 1/8" X 5/8" 6063-T5 aluminum which allows them to be easily bent to fit the contours of the wearer's back. At the same time they retain just enough "spring." The stays help hold the shape of the pack, give more support to the load, and aid in keeping objects in the pack from pushing against the wearer's back. The stays used in the internally framed packs are made from 1/8" X 1" 6061-T6 aluminum because of the much larger loads for which these packs are designed. In addition to the functions already mentioned above, the stays allow positive transfer of the pack load to the waist belt and hips.

**Stitching:** All HINE/SNOWBRIDGE packs are double or triple stitched and/or bar tacked at points of high stress such as where attachments are made through seams. On the larger models, all major structural seams are double sewn to give the pack an extra margin of safety for carrying extra heavy loads under extreme conditions.

**Accessory Strap Holders:** Accessory strap holders are used to strap extra items to the pack. Our accessory strap holders come in several sizes, depending on the model and the function for which the pack was designed. All are made from tough 7 to 8 ounce leather.

**Zippers:** All our zippers are double sewn to the fabric, providing twice the strength of zippers in many other packs on the market. Most of our zippers also have a cover flap made of the pack fabric which protects the zipper from rain, snow, and abrasion.

## About Our Guarantee

All HINE/SNOWBRIDGE packs are guaranteed against defects in materials and workmanship for their useful lives. We will gladly repair any defect which is not the result of misuse or normal wear and tear. Please contact your dealer should any problems or questions arise.

# Serex

The Serex, our expedition grade pack, is designed to overcome some of the inherent problems of a frame pack. It is ideally suited for summer/winter mountaineering, hiking into almost inaccessible climbs, high country extended ski tours, and many other applications where the user does not want the rigid back and shoulder constrictions of a standard frame pack. The Serex is a pack that provides a "live" load which moves with your body instead of fighting it.

The Serex combines an adjustable yoke suspension system, internal aluminum stays, compressor side straps and a draw string opening to make the pack as versatile in fitting different people as it is adjustable in fitting different load volumes.

A perfect mating of design and function, the Serex is equally suited for carrying large loads into a base camp as it is for taking a minimum of equipment to a day climb.

The adjustable yoke suspension system allows the Serex to be carried by almost everyone, large or small. It allows the pack to change hands in the middle of an expedition so that a variety of personnel can use it. The yoke suspension also allows the wearer almost limitless adjustability to alter the pack's position while keeping the load close to the back. The

compressor straps, draw string closure, and adjustable top flap tie down straps allow the pack to be carried comfortably with an extremely variable volume of loads. Fully extended, the pack can carry over 4500 cubic inches of equipment; contracted, it can be carried with a minimum of equipment without bothersome shifting of the load.

The Serex is designed to be carried much along the lines of a frame pack with the tapered bag and canted bottom concentrating the load on the waist belt. The pack bag is also sewn directly into the waist belt for positive weight transfer, while the waist belt is designed to flair when it is tightened down to sit on the wearer's hips instead of just cinching around them.

The entire suspension system of the Serex has been reinforced. Nowhere is it dependent on the fabric for strength. Everywhere the web is sewn into the fabric, it connects with, or is sewn into, a backing of another piece of web. This insures that the pack will hold up under maximum stress.

As with all large volume packs, the load and activity dictate the way the user should pack and carry his equipment. It is recommended that he try to pack the bag in a way that it

keeps its front-back profile. This keeps the load close to the back. We suggest the wearer stuff the bag first, then pull the compressor straps to tighten the load.

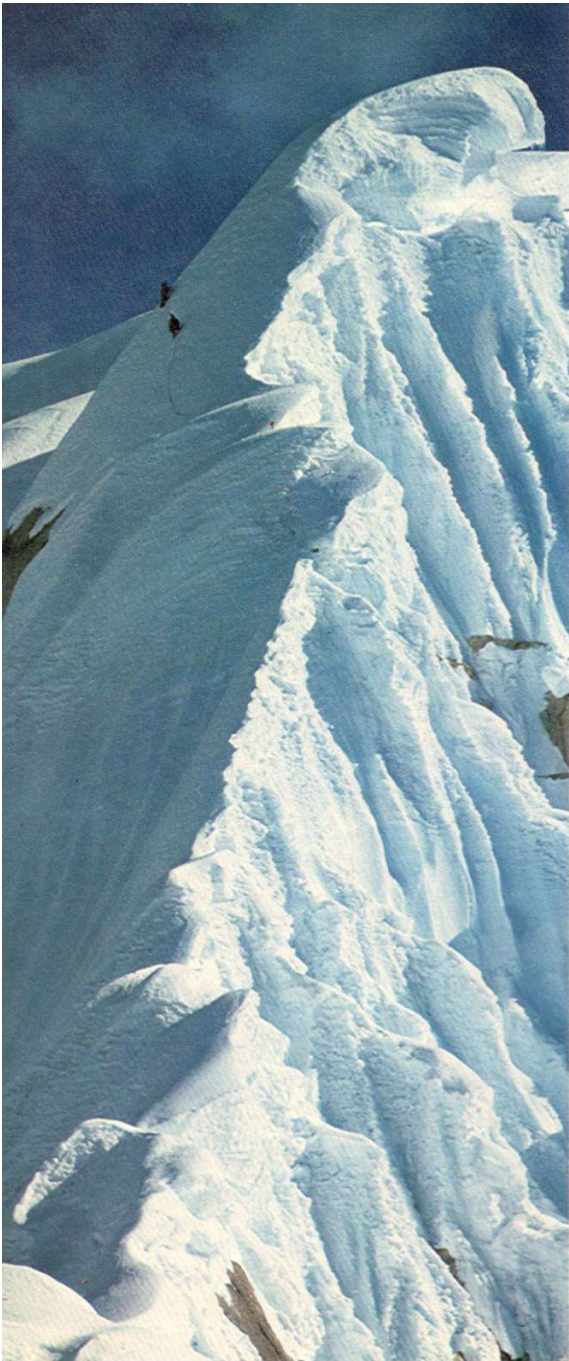

After a little time on the trail, the user quickly finds the most comfortable suspension system adjustment for his particular load and type of terrain. The load adjusts quickly and easily from the shoulders to the hips and back while carrying the pack, providing maximum adjustability for any type of load and changing terrain.

While the basic pack has adequate volume for almost any use, the Serex can easily be fitted with our optional side pockets for those who need more room or increased compartmentalization.

## Serex

**Primary Function:** Expeditions—Including extended winter/summer mountaineering, ski touring, rock climbs, and other uses where maximum load capacity and pack flexibility are desirable.

## Alpha

The ALPHA is our mid-sized internally framed pack. Designed smaller than the Serex, but larger than the TAMARAK, the ALPHA has significantly more compartments than both.

A "false" bottom separates the ALPHA into two distinct sections. The lower closes with a strong #10 coil zipper and is large enough for a winter down sleeping bag. The upper compartment is capable of carrying all the rest of your back-country necessities. It also has a vertical divider to increase equipment accessibility and keep the pack's thin profile. The ALPHA has the unique H/S quick access system into this upper compartment.

The H/S internal "X" frame and modified yoke suspension allow extreme adjustability while keeping the load close to the wearer's back. The "X" stays are removable for those who occasionally need a totally soft pack.

Other features include four external pockets, crampon patches, an ice axe loop and tie down above and below the ski slots behind the side pockets. As with the SEREX there are two accessory patches under the top flap for securing ropes, tents, etc.

COMPARTMENT

The ALPHA comes in two models: the ALPHA and ALPHA/SPECIAL. The ALPHA/SPECIAL has all of the above features and more: it has an extra exterior pocket in the top flap for maps, a cross chest strap to help stabilize the heaviest loads and compression straps on the bottom compart-

ment. In addition, internal modifications on the ALPHA/SPECIAL facilitate maximum flexibility on volume control. The vertical divider in the main compartment laces in and is both adjustable and removable. It may be used partially or not at all. Between compartments the "false" bottom divider unzips to fold against the rear of the pack, opening the bag to one large volume.

## Tamarak

Travelin' in the woods or around the world by air, thumb, or canoe, the Tamarak is the pack for you. Designed with multi-purpose usage in mind, the Tamarak is equally at home flying to Europe as it is backpacking through our own Wilderness Areas. Flying around the world, it can be used for carry-on luggage because it's small enough to fit under a jet seat. While hitch hiking, there's no external frame to get hung up getting in and out of cars, or get broken in really rough treatment.

On your back, the Tamarak rides comfortably and securely whether you're portaging a canoe in Quebec, ski touring in the Alps, or just packing it through the desert southwest.

Comfort, stability and convenience add up to a great pack! The comfort and stability comes from the proven internal "X" stays in combina-

tion with the modified yoke suspension. The stays afford a wide base and positive weight transfer to the waist belt while the yoke suspension allows almost everyone, large or small, to be fitted to the pack exactly. Precise fitting and positive weight transfer assure a comfortable riding pack.

And convenience? The inverted "U" opening of the main zipper allows the best access of any pack. Open the zipper part way or all the way for varied access. Access to everything in the pack, not just the few items which happen to be packed near the top. Convenience also means three large external pockets so that the traveler can get at his necessities.

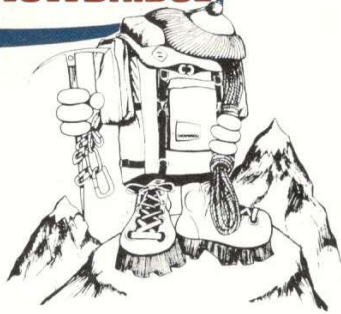

The Tamarak also has the "little" extras which make this pack stand out above all other in its class . . . internal tie downs to secure heavy objects for better weight distribution; outside

leather tie downs, top and bottom, an external document pocket on the front, designed especially for quick access to passports, airline tickets, topographic maps, etc.; a No. 10 YKK coil main zipper for long life and smooth running service; and 11 oz. Cordura® cloth because a travelin' pack really takes a beating whether it's on an airport conveyor belt or on the side of a mountain.

<b>Tamarak</b>

Colors:	Navy Blue, Bright Red

## Cirque

The CIRQUE is an extremely versatile design pack with an emphasis on rock and alpine climbing and ski touring. During a climb or in the snow it is often difficult to get into and/or load a pack properly. For this reason we have designed the CIRQUE with the H/S unique top flap closure system to provide instant access into the large main compartment. Besides good access into the equipment, the CIRQUE is designed with a foam pad insert (in its own zippered compartment) to protect the wearer's back from his equipment.

Other CIRQUE features include a high-sided, full grain leather bottom for maximum abrasion resistance, removable waist belt, 13 accessory patches for tying on skis, ropes, crampons, etc. Additional volume is available by simply strapping on optional H/S side pockets with an accessory strap. The CIRQUE is available in two sizes: the CIRQUE I and CIRQUE II.

<b>Mountaineer</b>	
Primary Function: Long one day hikes, climbs, and ski tours; one night bivouacs; cross country hitchhiking; outings where a medium capacity pack is desirable. Also excellent carry-on airline luggage.	
Approx. Weight:	43 oz. Mt'neer 46 oz. Ski Mt'neer

Approx. Volume:	2000+ cu. in.
Cloth:	8 oz. Nylon Pack Cloth
Colors:	Navy Blue, Forest Green, Orange

## Mountaineers

Mountaineers are among the most versatile medium capacity packs available. Not just ordinary hiking-climbing rucksacks, they combine the H/S felt padded leather, swing mounted shoulder straps and removable aluminum stay bars with the ruggedness and durability of YKK Delrin zippers and leather bottoms. Mountaineers have large (9" x 3" x 5") side pockets—large enough for a "poly" bottle and then some—and a big top flap pocket (11" x 3" x 10"). Besides three regular accessory strap holders on the top flap, these packs have two of the unique H/S extra large accessory strap holders on the bottom for strapping on parkas and other accessory equipment. The Mountaineers have easy access to the main compartment with a draw string opening and a Fixlock cord lock. Other features include a canted bottom to keep the load close to the back, clip in-out shoulder straps for quick removal, and the unique H/S removable waist belt which is adjustable from either side for the most comfortable positioning of the snap.

The Mountaineer and the Ski Mountaineer are identical although the Ski Mountaineer has ski slots behind the side pockets and large accessory strap holders above and below the pockets for attaching skis.

## Chinquapin

The Chinquapin has many of the features of the Mountaineer that it is cut slightly smaller. Features include H/S felt padded leather, swing mounted shoulder straps, removable aluminum stay bars, YKK coil zipper, large top flap pocket, drawstring on the main compartment, cord lock, canted leather bottom, removable waist belt.

(Chínk-wá-pín)

## Slant Lines

Basically a classic tear drop design with an upper and lower compartment. Diagonal zippers on the Slant Lines make these packs stand out. The zippers in a slant design give access into both compartments as well as the top of each compartment. Each zipper has two different opening from either side. Models have the H/S swing mounted shoulder straps made of full grain leather, top grain leather, removable waist belt, ice axe carrier strap, and canted bottom.

The "Standard" model comes with a nylon bottom (with two small accessory strap holders) while the "Rugged" model has a leather bottom (with two large accessory strap holders for attaching equipment).

## Day Pack

Rectangular in design, the Day Pack has a 16" zipper all the way around the front. Features include a large top flap pocket for organizing small items, the H/S swing mounted shoulder straps, removable hanging strap, and covered

je

CIRQUE is an extremely versatile pack with an emphasis on alpine climbing and ski touring. It is designed for use in the snow and difficult to get into and/or out of. For this reason, CIRQUE is designed with a unique top flap closure system for instant access into the main compartment. Besides the equipment, it is designed with a foam pad on its own zippered compartment to protect the wearer's back.

CIRQUE features include a full grain leather bottom for abrasion resistance, removable waist belt, 13 accessory straps for tying on skis, ropes, crammers. Additional volume is available by strapping on optional pockets with an accessory CIRQUE is available in two CIRQUE I and CIRQUE II.

These are among the most medium capacity packs. Not just ordinary hiking packs, they combine the padded leather, swing mounted shoulder straps and removable stay bars with the rugged durability of YKK Delrin zipper bottoms. Mountain packs have a large (9" x 3" x 5") side flap large enough for a "poly" liner then some—and a big top flap (11" x 3" x 10"). Besides the accessory strap holders, these packs have two large H/S extra large accessory holders on the bottom for parkas and other accessories. The Mountaineers have access to the main compartment with a draw string opening and cord lock. Other features include a canted bottom to keep the pack close to the back, clip in-out straps for quick removal, and a H/S removable waist belt adjustable from either side for comfortable positioning.

The Mountaineer and the Ski Mountaineer are identical although the Ski Mountaineer has ski slots behind the pockets and large accessory holders above and below the pack for attaching skis.

## Chinquapin

The Chinquapin has many of the same features of the Mountaineers except that it is cut slightly smaller and has fewer "extras." Features include the H/S felt padded leather, swing mounted shoulder straps, removable aluminum stay bars, YKK coil zipper in the large top flap pocket, draw string closure on the main compartment with cord lock, canted leather bottom, and removable waist belt.

(Chínk-wä-pin)

<b>Chinquapin</b>	
<b>Primary Function:</b>	Medium length day hikes, ski tours, and climbs. An excellent medium capacity "around town" and students pack. Bicycling.
<b>Weight:</b>	31 oz.
<b>Approx. Size:</b>	16-1/2" x 6" x 12"
<b>Approx. Volume:</b>	1425 cu. in.
<b>Cloth:</b>	8 oz. Nylon Pack Cloth
<b>Colors:</b>	Navy Blue, Forest Green, Bright Red, Bright Orange

## Slant Lines

Basically a classic tear drop design with an upper and lower compartment. Diagonal zippers on the Slant Lines make these packs stand out. By placing the zippers in a slanted fashion there is access into both the bottom as well as the top of each compartment. Each zipper has two sliders allowing opening from either end. Both models have the H/S swing mounted shoulder straps made of fully felt padded, top grain leather, removable waist belt, ice axe carrier, hauling strap, and canted bottom.

The "Standard" model comes with a nylon bottom (with two small accessory strap holders) while the "Deluxe" model has a leather bottom (for more rugged use) with two large accessory strap holders for attaching extra equipment.

<b>Slant Lines</b>	
<b>Primary Function:</b>	Shorter hikes, ski tours, bicycle trips, climbs, and "around town" general purpose uses with an emphasis on compartmentalization.
<b>Approx. Weight:</b>	18 oz. Std. 28 oz. Deluxe
<b>Approx. Size:</b>	17" x 6" x 11"
<b>Approx. Volume:</b>	936 cu. in.
<b>Cloth:</b>	8 oz. Nylon Pack Cloth
<b>Colors:</b>	Navy Blue w/Yellow Flaps, Forest Green w/Yellow Flaps, Navy Blue w/Red Flaps

## Day Pack

Rectangular in design, the Day Pack has a 16" zipper all the way around the top front. Features include a front pocket for organizing smaller items, the H/S swing mounted, padded shoulder straps, removable waist belt, hanging strap, and covered zippers.

<b>Day Pack</b>	
<b>Primary Function:</b>	General purpose uses including day hikes, ski tours and bicycle trips. Student's book pack.
<b>Weight:</b>	16 oz.
<b>Approx. Size:</b>	16" x 5" x 12"
<b>Approx. Volume:</b>	950 cu. in.
<b>Cloth:</b>	8 oz. Nylon Pack Cloth
<b>Colors:</b>	Navy Blue, Forest Green, Bright Red, Bright Orange

## H/S Basic

The H/S Basic is an excellent pack for the economy minded individual. Inexpensive, but look at these features: Draw string closure with a cord lock; top flap pocket; kangaroo pocket on the front; strong nylon web shoulder straps; hang loop; double sewn zipper; reinforced stitching at points of high stress; "dee" rings provided for attachment of a waist belt.

### H/S Basic

**Primary Function:** An ideal pack for short hikes, ski tours, bicycling and students. Also an excellent "summit pack" for carrying in larger packs.

**Weight:** 11 oz.

**Approx. Size:** (main bag) 14" x 5-1/2" x 10"

**Approx. Volume:** 900 cu. in.

**Cloth:** 8 oz. Nylon Pack Cloth

**Colors:** Navy Blue, Forest Green, Red, Orange, Bright Yellow

## Powell Pack

The Powell Pack, primarily designed for ski touring, is worn around the waist, thus completely freeing the user's shoulders. Its volume, larger than most waist packs, allows the wearer to carry a variety of items for a day outing. Features include two slides on the zipper for easy access, two accessory strap holders on top for strapping on extra items, and a wide (2") waist belt for added carrying comfort. It is contoured for a better fit around the wearer's back and is light enough to be carried as a second pack inside a frame pack.

### Powell Pack

**Primary Function:** Day ski tours, hikes, and climbs where maximum shoulder freedom is desirable. Also downhill skiing.

**Weight:** 11 oz.

**Approx. Size:** 18" x 5-1/2" x 5"

**Approx. Volume:** 470 cu. in.

**Cloth:** 11 oz. Cordura\*

**Colors:** Navy Blue, Bright Red

## Optional Pockets

The H/S OPTIONAL POCKETS are designed to fit the SEREX and the CIRQUE packs. They add 360 cubic inches of accessible carrying capacity outside the packs, or compartmentalization inside. Plenty big for water bottles, etc., one or both pockets can double as a belt pack if needed.

The pockets come as a matched pair. Accessory straps for strapping on the CIRQUE only (not needed on the Serex) not included.

### Optional Pockets (Pair)

**Weight:** 6 oz. (Pair)

**Approx. Size:** 12"X2-1/2"X6" (Each)

**Approx. Volume:** 360 cu. in. (Pair)

**Cloth:** 8 oz. Cordura\*

**Colors:** Navy Blue, Bright Red

## Belt Pack

Designed to be carried on the user's belt, this small pack can be used for anything from first aid kits to ski touring wax sorters. It also can be used as a seat bag on bicycles.

### Belt Pack

**Primary Function:** Carrying small items where quick access is useful. Sorting and organizing items in larger packs.

**Weight:** 2 oz.

**Approx. Size:** 7" x 2" x 4-1/2"

**Approx. Volume:** 70 cu. in.

**Cloth:** 8 oz. Nylon Pack Cloth

**Colors:** Navy Blue, Forest Green, Red, Orange, Yellow

## H/S Cargo B

Versatile, practical and HINE/SNOWBRIDGE Cargo are great for any outdoor & traveling needs. These Cargo feature #10 YKK coil zipper sliders (which can be together), 11 oz. Cordura cloth and end carrying handles. A zippered pocket in one

## The H/S T-Shirt

If you're "packin' it up," one of these shirts. They're heavy duty, 100% cotton with the mark of HINE BRIDGE silk screened in blue, brown and black. "Packin' it up" is what it's all about. The message. We can't guarantee impact. We can insure that. After all, it's a product SNOWBRIDGE.
